

Nucell®IM supports the resistance of athletes implementing a demanding training plan.

CLINICAL TESTS

Nucell®IM

It provides a natural building block for the creation of new cells that support the immune system.

For 6 days of taking Nucell®IM or placebo, the average levels of discomfort were as follows:

Higher antibody levels indicate a stronger immune response.

The concentrations of IgA (antibodies) in saliva were similar in the initial phase, however, over time they increased mainly from the nucleotide group.

Nucell®IM supports the resistance of athletes implementing a demanding training plan

Research carried out by prof. Lars McNaughtona, University of Bath, 2002.
